numares HEALTH presents its developments at the Roche Service Day

Regensburg, June 12th 2013 – Selected from a pool of 100 companies from the pharmaceutical and biotech industry, numares HEALTH was invited to the Roche Service Day in Penzberg (Germany) by Roche, one of the leading pharmaceutical companies, and the Cluster Biotechnology Bavaria in Munich.

As one of 30 exhibitors, in vitro diagnostics (IVD) manufacturer numares HEALTH presented its products and developments in the fields of cardiology, oncology and nephrology to an interested professional audience in the cafeteria of the Roche company complex.

numares HEALTH develops innovative IVD tests (e.g. for the early detection of diseases) based on patented algorithms and unique know-how in the field of nuclear magnetic resonance spectroscopy. The company has developed a simple blood test allowing for a differentiated analysis of lipoprotein subclasses in a high throughput for the first time. The test results enable a better prediction of the risk of cardiovascular disease.

On a fee-for-service basis, **numares HEALTH** offers its IVD tests to the pharmaceutical industry which, in the context of clinical trials, investigates the therapeutic effects of drugs for example. .

"Our developments in the field of in vitro diagnostics have aroused considerable interest among Roche employees", says Ralf Tusch, Director of Marketing & Sales at numares HEALTH. "The intimate, exclusive atmosphere was the perfect setting for high quality contacts and discussions. We at numares are thrilled to have had this opportunity to participate in and benefit from the Roche Service Day."

About numares HEALTH: Innovative, NMR based diagnostic tests

numares HEALTH is part of the numares GROUP, which develops innovative products and applications based on nuclear magnetic resonance (NMR) spectroscopy for various fields. The business unit numares HEALTH focuses on the development and marketing of medical devices/diagnostic tests for the healthcare sector and medical research.

For some years now, the company has been involved in numerous collaborations with research institutions, which help to pursue a purposeful product development for laboratory diagnostics. Using the findings obtained from these collaborations, numares HEALTH conducts a targeted development of innovative diagnostic approaches.

In addition, the company supports customers with complex issues and clinical trials with its many years of expertise and experience in the field of NMR spectroscopy and metabolomics.
